EDUCATION

Tufts University, Medford, MA

Expected Graduation May 2028

Bachelor of Science in Computer Science and Sociology, Spanish Minor | Dean's List All Semesters | 3.7/4 GPA

Relevant Coursework: Data Structures, Algorithms, Quantitative & Qualitative Research Methods, Game Design

The Park School of Baltimore, Baltimore MD

September 2020 – May 2024

3.96/4 GPA | *High School Diploma | Scholastic Silver Key Award in Poetry*

Relevant Coursework: Programming with Arduino, Advanced Python, Data Science & Machine Learning

EXPERIENCE

Product & Frontend Development Intern, NeuroFore

June 2026 – Present

- Own the doctor-facing clinical interface for a Parkinson's symptom-detection product end-to-end, as the sole engineer on the interface; live and in use by physicians, cutting chart-review time by an estimated 60% (per NeuroFore team estimate).
- Talk directly with physicians who use the tool daily to turn their workflow pain points into concrete requirements and user flows, then prototype in Figma to validate direction before building, reducing redesign cycles.
- Build a custom design system, including a component library and style guide, in Figma, enabling consistent UI across new features and shortening feature-shipping time.

Developer, Tufts Jumbocode

September 2025 – Present

- Partnered with School on Wheels MA, a nonprofit reaching students across 10 MA communities, to build a full-stack analytics dashboard (TypeScript, React, Node.js, PostgreSQL) that cut monthly reporting time by an estimated 75% (per staff before/after comparison).
- Wrote SQL queries and built dashboards on top of PostgreSQL data, integrating Google Analytics and Meta APIs to turn usage metrics into actionable insights for a non-technical staff audience.

UX & Product Design Intern, MALP Education

December 2025 – April 2026

- Ran user research and needs analysis on MALP's teacher training platform, talking to teachers who used the tool daily to identify pain points and translate them into actionable requirements before proposing solutions.
- Partnered with design and curriculum teams to ship navigation and clarity improvements that cut teachers' average time to find a resource by 48% (per post-launch survey).

PROJECTS

Founder & Lead Designer, Raven Rhythm, C#, Unity, Audacity, Logic Pro

- Founded and led a small team to design, build, and ship a full rhythm game in Unity from a blank concept to a complete playable build, owning the product end-to-end: scope, timeline, and every system in the game, and coordinating design, audio, and engineering workstreams to hit a self-set launch timeline.
- Built the core gameplay systems myself in C#, including a custom timing engine and beatmap system, plus a self-composed soundtrack and full level design, working directly with engineering to turn design intent into a shippable build.
- Ran structured playtests with real players and used their feedback and behavioral data to catch bugs and rebalance timing and difficulty, iterating the game across multiple release cycles based on what players actually did.

AhavCare, WordPress, PHP, MySQL, Stripe API/Connect, Tailwind CSS

- Hired to build a two-sided marketplace (babysitting booking platform) end-to-end, from requirements through a live, payments-enabled product, owning the core product decisions as well as the engineering across the web app, APIs, and database.
- Designed a ranked-priority matching system (parent picks 1st/2nd/3rd choice sitter, automatic waterfall, pool expansion fallback), then revised timing windows and resolution logic based on real usage to cut parent wait time.

LEADERSHIP

Tufts Vietnamese Student Club, Outreach Chair

May 2025 – Present

- Led events for 200+ attendees; managed logistics and partnerships with campus and local community organizations.

Park School Immersion Week, Student Body Vice President

September 2023 – June 2024

- Primary organizer of a weeklong experiential learning program connecting 400+ students with Baltimore-based organizations and volunteer opportunities, coordinating directly with the school board to plan curriculums and logistics.
- Secured a \$2,000 grant and negotiated transportation and scheduling logistics to fund and run the full program budget.

SKILLS

Product & PM: Requirements & user-flow documentation, translating user pain points into acceptance criteria, usage-metric & dashboard analysis, cross-functional coordination with engineers, structured playtesting & QA feedback, Agile

Languages & Data: Python, SQL (PostgreSQL, MySQL), PHP, C/C++, TypeScript, JavaScript (React, Tailwind), HTML/CSS

Developer Tools: Figma, Git, WordPress, Stripe API, MATLAB, Pandas, NumPy, Node.js, Prisma, Clerk, Claude Code (AI-assisted development)

Game Development: Unity, C#, systems & level design, audio design (Audacity, Logic Pro), GitHub Actions (CI/CD)

Spoken Languages: English, Spanish

Awards: Tufts AI Policy Hackathon (2nd Place, AI governance), Tufts Jumbohack (2nd Place, Education Track)
